Assignment screenshots openstack configuration in:

For error me I vai the command line below

```
Architecture: x86_64
[root@control ~(keystone)]# openstack compute service list
Failed to discover available identity versions when contacting http://192.168.11.10:5000/v3. Attempting to parse version from URL.

```

But I check the NginX is active normal:

```

When I check the status of httpd is error, I have config follow step by step on file word control server Centos, I asked my classmate help me to solve the problem but is error. (I used CentOS8)

```

[root@control ~(keystone)]# systemctl status httpd
